

## Plan Your Spring Garden Now!

### The Most Time-Saving, Efficient, and Lowest Cost Systems

Many of us have more gardening goals than time to accomplish them. We designed this system for people who only have an hour or two on weekends for gardening. It maximizes ease of set-up, automatic watering, and lowers cost. Just attach this to a 24/7 water line and gravity takes care of the rest. It's even possible to plant in the spring and only return for the harvest.

### Build-Your-Own Backyard Garden Kit

### Start-up

The foundation, the heart of this system

This 5-gallon bucket kit has a built-in float valve and bulkhead fittings for both the water input and output. The input side has fittings to connect to a regular garden hose, to a ½" drip line, or to PVC and most other kinds of water supply lines. Using this float valve reservoir eliminates the need for pressure reducers and lets the system work well during the fall and winter when we need to be careful about waterlines freezing. We can either quickly fill it up from a waterline during the day and then turn the water off to prevent freezing, fill it up by hand, or fill it from a larger reservoir. **IG18380 \$28 Add to Cart**

## Input Options

If you don't have a supply line yet, just add either the 50' or 100' option. Add a pressure reducer like the one below if your water supply pressure is over 50-60 psi. The optional Water Level Indicator helps if filling by hand or as a quick indicator that the system is working properly.

**50' ½" Supply Line IG18464 \$19 Add to Cart**  
**100' ½" Supply Line IG18465 \$26 Add to Cart**  
**Pressure Reducer Line IG18398 \$15 Add to Cart**  
**Water Level Indicator IG16809 \$10 Add to Cart**

## Output Options

Output options include an irrigation kit with adapters to water a 4' x 4' garden bed, a 4' x 8' bed, either 50' or 100' of soaker hose for plants along a fence or not in beds. For small systems, this is a simple way of controlling your pressure without needing a pressure regulator - just raise the reservoir higher for more water, lower for less. The output fittings include an adapter to the included 8mm line these kits use. Each includes the fittings and supply line to go from the bucket to the bed plus an auto-irrigation system.

**4x4 Bed Kit IG18442 \$19 Add to Cart**  
**4x8 Bed Kit IG18449 \$30 Add to Cart**  
**50' BluSoak w/ fittings IG18461**  
**100' BluSoak w/ fittings IG18462**  
**10' SuperFlex IG15635 \$9**

### Complete Kit

Everything you need for a 4x8 bed

This kit includes 50' of supply line, the float-valve bucket, connections and fittings to go to and irrigate a 4x8 bed.
